Class Content

This 2-day course is designed to provide students with an opportunity to implement mitigating actions in a simulated environment on a generic system Finist OTS. The course includes a wide scope of system conditions that must be mitigated. Each area of simulation is proceeded with a brief overview to the causes, actions, and responses required to return the system to a reliable state. The simulation conditions include the following: Voltage Control and Mitigation, Transfer Limitations and Congestion, Relay Operation and Response related to UVLS, UFLS, and SPS/RAS, System Switching, and System Restoration. The goal is to provide attendees with training and hands-on activity through simulation technology the opportunity to better understand operating concepts and to mitigate various operational conditions. The simulation provides a first-hand perspective of the implications to and response of the system when actions are implemented by System Personnel.
